

Minutes:

Plenary Session of the IUGG Commission for the Cryospheric Sciences, UCCS Perugia, Italy (IUGG General Assembly) 12 July, 2007

Rectorate Building, University of Perugia, Piazza dell'Università 1, IT-06123 Perugia,
Italy, Meeting Room VIII

1. Opening Remarks

The President *Georg Kaser* opened the Plenary session at 17.45 and welcomed everybody. He commented on the large attendance despite competing events. The President explained that the Plenary that would normally contain voting for a new bureau, this time would be very informal; the new bureau is appointed by the IUGG. The President provided a view of the UCCS activities at the Perugia Plenary which is much stronger than what has been achieved while acting as a regular Commission. This indicates that the new status provides more room to manoeuvre and improve scientific activities.

2. Montreal Joint IAMAS/IAPSO/IACS Assembly, 2009

The President reported on the upcoming Assembly and informing about the upcoming call for ideas for workshops and symposia.

3. ICSI/IACS History

The Past President *H. Gerald Jones*, has written an extension of Uwe Radok's history of ICSI (available at www.cryosphericsscience.org). The Past President provided a short overview of the events that has led to the development of IACS and its predecessors. This account will be published in the Annals of Glaciology volume covering the Perugia Assembly. The President *Georg Kaser* provided a short presentation of the new Association (**APPENDIX A**)

4. Award to Past President H. Gerald Jones

The UCCS bureau awarded Past President *H. Gerald Jones* for his outstanding services to the Bureau. The award was manifested by an engraved Mont Blanc Pen.

5. IGS letter of congratulations

IGS Secretary General *Magnus Magnusson* read a letter of congratulation from the IGS President *Atsumu Ohmura*, who unfortunately could not attend the Plenary. The letter is reproduced in its entirety in the **APPENDIX B**.

6. IACS Mission

The UCCS Secretary/treasurer presented a short overview of the mission of the IACS based on the stated missions in the IACS statutes. WDC President *Roger Barry* expressed the wish from the World Data Centers to obtain formal support. It is clear that this is an activity which can be improved in the future under IACS.

7. Closure

The President closed the meeting at 18.15, July 12, 2007 by providing the audience with a visual reminder of the acronym IACS; think of a herd of Yaks!

This constitutes the end of the ICSI/UCCS Era.

THE MISSION

- Promote Cryospheric studies
- Facilitate collaboration on different levels nationally and internationally
- Promote international discussion, and publication
- Promote education and public awareness
- Facilitate standardization, data collection and archiving
- Complement existing structures (IGS, AGU, EGS)

International Association of Cryospheric Sciences

Dear Mr President, bureau members and all members of the new association:

On behalf of the International Glaciological Society I would like to congratulate you on the establishment of a new Union Association dedicated to the Cryosphere. You have finally obtained an Association that is dedicated to the promotion of the science of snow and ice. Its predecessor, ICSI, was one of the oldest commissions within the union, and certainly one of the most scientifically active commissions of IAHS. The outstanding scientific accomplishments and enthusiasm of glaciologists contributed greatly to the emergence of the new Association. In this sense the birth of IACS is a victory and an important asset for the future progress for all glaciologists.

We must remember that certain individuals contributed enormously and worked hard in unseen places to reach this goal. They truly deserve a hearty thanks and admiration from all glaciologists. At the same time we must consider the situation of IAHS that the new Association has left. It is important that the IAHS maintains a modest area of the research of snow and ice, as the hydrological cycle without the Cryosphere is inconceivable. We must remember that the Cryosphere is located at the intersection between the atmosphere, the hydrosphere and the lithosphere. If IAHS needs any assistance in this regard, we are ready to help at any time. We wish the Association a productive and brilliant future.

The International Glaciological Society is happy to pursue the common goals through cooperation with the new association for the benefit of glaciologists worldwide.

Yours sincerely,

Professor Atsumu Ohmura

President
